

Gunnebo EntraLing

Remote Connectivity for Gunnebo Gates

Smart gates and the IoT

Utilizing cloud-based technology to control entrances - The Internet of things (IoT) is becoming more commonplace in a modern, digital world. Simply put, IoT allows devices to communicate on enclosed, private and secure networks via the cloud to facilitate each other and work in tandem.

By combining connected devices with automated systems, it is possible to gather information, analyse it, and create an action. This is what EntraLing has been designed to do.

Why use IoT

Connected devices that share data allows smart activity and this has a large sustainability benefit. Sensors, data collection and automated action translates to a save on costs, time and energy. It makes our processes more efficient, streamlined and above all, intelligent. Technology is advancing faster than ever and the IoT allows access control to work smarter, designed with the future in mind.

Connect to protect

Smartphone and device control from remote

The Gunnebo EntraLing app provides full control of your Gunnebo product from anywhere, no matter if on site or on the move. The intuitive app runs on smartphones and tablets and connects to any Gunnebo product connected to its cloud.

Control your accesses

Gain control over access points, allows single passage and the ability to change modes at the touch of a button, all from anywhere in the world you are connected.

Health check your security

Ensure your connected gates are operating as they should, check on the status of the gates, or be notified of fraud attempts, alarms or technical incidents in real time.

Analyse Process data

Monitor the processes that occur throughout the day and over a period of time. The process function presents statistical data and graphs to accurately determine flows, activity levels, usage and fraud counts.

GUNNEBO

Gunnebo Integration Capabilities

The Gunnebo SpeedStile is known for its ease of compatibility with integration. Our solutions are highly customizable, with a wide variety of in-house and third-party systems able to be integrated into our Entrance Control solutions.

The most common varieties include:

LIFT DESTINATION CONTROLS:

Lift integration and control	Multiple inputs and outputs in case of breach	Screen surface controls or Integrated controls in cabinet
------------------------------	---	---

BIOMETRIC READERS:

Fingerprint scanning	Facial recognition	Gate recognition	Iris recognition
----------------------	--------------------	------------------	------------------

ACCESS CONTROL OPTIONS:

Access control options	Membership systems	Ticketing systems	BMS, Fire, Access control integration
------------------------	--------------------	-------------------	---------------------------------------

CARD READERS:

Integration of customer supplied readers into the SpeedStile top or front inlays	Proximity, magnetic stripe, biometric or barcode readers all compatible	Motorised readers or barcode scanners mounted to accommodate visitor access
--	---	---

VISUAL LIGHTING SYSTEMS:

Mounted in the SpeedStile drive column to act as traffic light flow control	Custom LED lane lighting	Custom logos and etching on SpeedStile barrier	Surveillance cameras and security equipment integration
---	--------------------------	--	---

MULTIPLE CONTROL SYSTEMS OPTIONS:

Remote lane control	Simple pushbutton console to control the SpeedStile barrier release	Custom remote pushbutton console to specific requirements	Casework mounted pushbutton	Digital touchscreen with advanced controls
---------------------	---	---	-----------------------------	--
