

# Gunnebo ImmSec S

## Automated Immigration Gate

The Gunnebo ImmSec S is a specifically designed single obstacle gate solution used for the automated validation of travellers at one of the most security sensitive areas in an airport: **immigration**.

The slim and ergonomic design allows the ImmSec S to be installed in single or multiple lane configurations, providing an open feel to the traveller without compromising security.

The gate automates and accelerates the immigration process whilst ensuring that only one person is permitted per authorised passage.

Families and assisted travellers should be processed directly by immigration personnel and travellers with standard cabin luggage are able to be processed

automatically by the Immsec S.

Designed upon a modular chassis platform to provide flexibility in accommodating different data and biometric capture and verification devices which are integrally mounted on the entry to the gate for pre-capture and validation or internally between the secure interlocked gate panels.

The Immsec S can be equipped with readers for smart ID cards, MRTDs and RFID passports, as well as biometric technology.

Gunnebo has employed its robust mechanism philosophy to keep operation and maintenance cost to a minimum and maximise throughput.

## Technical Specifications

### Drive

High reliability DC motor and brake mechanism

### Materials

- Casework: 304 grade grained stainless steel and anodised aluminium
- Moving panels: 10mm frameless toughened glass
- Side panels: 10mm toughened glass

### Function

Uni-directional electronic passage control with single person detection and monitoring to facilitate Immigration passport verification processes.

## Operational Modes

Flexibility to integrate kiosk with peripherals and biometric technology. Flexible communications protocol allowing for with easy software integration.

**Emergency Mode:** In this mode the exit door is locked and the entry door is open.

**One-Step Process:** Designed as a one-step process combines the verification of the traveller and the traveller's secure passage through the border. This design allows the traveller to complete the whole transaction in one single process without the need to move to another stage.

## Detection

Single person passenger detection in controlled validation area – ensures only 1 person in the validation area of the gate. Movement detection through gate via beam sensing and overhead detection after authorization.

## Technical Data

Power Supply	110/230Vac 50/60Hz
Power Rating	Peak 450VA* Standby 170VA
Operating temperature	-5°C to 45°C 95% RH non-condensing
Flow Rates	Dependent on individual Immigration verification requirements
MTTR	< 30 minutes
MCBF	10 million cycles

\*Approx 450VA including all third party peripherals in a typical configuration.

## Features

- Up to 900mm clear walkway configurations
- Traveller status lights
- Fail safe (push through in case of power failure) or fail lock (locks in position)
- Emergency opening configurable
- Local or remote control
- Suitable for biometric peripheral interface

## Benefits

- Accelerates the immigration process
- Automates the entry process and collection of data
- Superior single-person detection system
- Increased security with integrated biometric technology
- Reduction in staffing costs
- Glazed passageway gives high visibility of passengers
- Disabled compliant

# Site Preparation

Standard Lane (682.5mm) and Wide Lane (900mm) Widths

## Site Preparation

Standard Lane (682.5mm) and Wide Lane (900mm) Widths

**Please note:** this is an example of one possible implementation. Some dimensions can vary according to requirements.

Concrete Base to specification at least (cube) 300N/mm<sup>2</sup> of resistance. Base to be flat and level to +/- 5mm over footprint area.

# Gunnebo ImmSec S

## International Standards

CE Compliance meeting the following directives:

- 2006/42/EC Machine Directive
- 2014/35/EU Low Voltage Directive
- 2014/30/EU EMC Directive

## Norms

- EN 61000-6-3 (2007) Electromagnetic Compatibility – generic standard, emissions
- EN 61000-6-2 (2007) Electromagnetic Compatibility – generic standard, immunity
- EN60335-1 (2012) + EN60335-1/A11 (2014) Household and similar electrical appliances. Safety. General requirements
- EN16005 Power operated pedestrian doorsets – Safety in use – Requirements and test methods
- Safety system ISO EN13849 performance level C
